

Get Automated

With up to 850 Sash per Shift in
under 1200 square feet!

Winner of the 2007
Crystal Achievement Award
for Most Innovative Machine!

The Stürtz Compact Sash Line offers a space saving solution for high production welding and cleaning with capacity for up to 850 welded and cleaned sash per shift in under 1200 square feet, and with only one operator! The close proximity of the double stack welders allows one operator to efficiently load both machines. Upon removal of the welded sash via a high speed belt system, the welders automatically size for the next cycle. The belt system then

feeds the sash into a four head cleaner designed to clean all four corners simultaneously in approximately 25 seconds. The cleaner can be outfitted with optional tilt latch routing and pivot bar insertion drilling.
